                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STAGE, IS NECESSARY FOR T7 GENETIC RECOMBINATION AND THE BREAKDOY OF HOST DNA. IN THE EARLY STAGE OF INFECTION, T7 DNA REPLICATES / A LINEAR MONOMER. IN THE LATE STAGE, THE T7 DNA REPLICATES VIA LINEAR CONCATEMERS SEVERAL GENOMES IN LENGTH. THE GENE 3 PRODUCT HAS ALSO BEEN IMPLICATED IN THE MATURATION OF THESE CONCATEMERS. CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           σ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Celis transformed with a vector containing Ct the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC disease; Creutzfeld-Jakob disease; polsoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; polsoning by heavy metals or drugs; CC dibetes; schizophrenia; disorders of growth hormone secretion; cancer; CC operative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC related sequences; in receptor-binding assays; for production of Ab and CC related sequences; in receptor-binding assays; for production of Ab and CC cantibode.

CC antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

This peptide contains the partial C-terminal sequence of the synthetic citiand polypeptide 19p2-13i which is capable of binding to a G protein-coupled receptor protein. This peptide Is used as an antigen to protein-coupled receptor protein. This peptide Is used as an antigen to CC prepare rabbit anti-bovine 19p2-131 antibodies which are used in binding consays. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. This itgand could have specific craphications as a prophylactic or therapeutic agent for dementla, complications as a prophylactic or therapeutic agent for dementla, complications as a prophylactic or therapeutic agent for dementla, complications, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, typer-and polyphagia, hyperlipidaemia, hypercholesterolaemia, compersiyeeridaemia, hypercholesterolaemia, compersiyeeridaemia, hypercholesterolaemia, compersiyeeridaemia, hypercholesterolaemia, compersiyeeridaemia, hypercholesterolaemia, compensiyeeridaemia, hypercholesterolaemia, compensiyeeridaemia, bone fracture, trauma, atopic dermatitis, osteoporosis and compensions because can allocate and compensions and accuration and a compensions of the compensions and a c

                                                                                                                                                                                                                                              and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 43; Page 151;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ligand peptide for G protein-coupied receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW97229-31 represent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulating composition secretion which comprises a ligand polypeptide or a salt, for a cyrotein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing composition or provential secretion can be used for promoting lactation in a domestic mammal and as an aphrodislac. The agents for limibiting prolactin commonate an aphrodislac. The agents for limibiting prolacting commonate an aphrodislac. The agents for limibiting prolactions, confertifity, impotence, amenorates, galactorrhea, acromegaly, confertifity, suctions, lymphoma, Sheehan syndrome or dyszoospermia. The lnhibitory conferts can also be used as contraceptives. The agents for modulating chacental function can be used for treating or preventing conferts can also be used for treating or preventing conferts, abnormal saccharometabolism, abnormal lipidmetabolism or coverces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 1992 ligand.
        The Invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or derivative. The antibodies can be used in diagnosis or to treat or

                                                                                The invention provides a monocional antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of projectin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 1992 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic prophylactic or therapeutic agent for dementia, depression, hyperkinetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              G protein-coupled receptor; ligand binding; pharmaceutical; modulator; pituitary; central nervous system; pancreas; pro

                                                                                                               Ş
                                                                                                                                      CC This sequence represents a peptide fragment from a novel rat type CC ligand polypeptide corresponding to amino acid residues 33 to 52 of the CC sequence represented in AAW31383 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC hyperilpiddemia, hypercholesteroldemia, hyper-and polyphagia, CC hyperilpiddemia, hypercholesteroldemia, hypergiyceridaemia, for the hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC transient brain ischæmia, epilepsy, amylotrophic lateral sclerosis, CC coute myocardial infarction, infertility, spinocerebellar degeneration, CC bone fracture, trauma, atopic dermatitis, osteoporosis and/or collegosatetia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.

                                                                                                  CC This sequence represents a peptide fragment of a novel bovine pituitary CC derived ligand corresponding to amino acid residues 34 to 53 of the Sequence in AAW31368 and is used in an assay to monitor ligand binding CC to the G protein-coupled receptor protein. Pharmaceutical compositions CC central nervous system modulator or a pancreatic function modulator. a CC central nervous system modulator or a pancreatic function modulator. CC This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, CC disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, CC disturbance secretory disease, hyper-and polyphagia, cC hypercholesterolaemia, hyperglyceridaemia, hyperlipidaemia, hyperglyceridaemia, hypertipidaemia, hyperprotactinamia, diabetes, cancer, pancreatitis, renal disease, hyperprotactinamia, diabetes, cancer, pancreatitis, spinal injury, CC transient brain ischaemia, amylotrophic lateral sclerosis, acute myocardial infarction, spinocerebellar degeneration, bone fracture, CC trauma, atopic dermatitis, osteoporosis, asthma, epilepsy, infertility cand/or oilgogalactia, Asaays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                                                                                                                                                                                                                                                          pituitary adenomatosis, brain tumour, emmentopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, gaiactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan ayndrome or dyazoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoms, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a bovine pituitary-derived ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a grottein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypometabolism. They can by used for promoting syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammai and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing prolactin secretion can be used for treating or preventing prolactin secretion can be used for treating or preventing pituitary adenomators to the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for treating or preventing of the secretion can be used for the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommei ayndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism;

                                                                                                                    The present sequence represents a rat type iigand fragment. It
is used in the course of the invention. The specification describes
an agent for modulating proiactin secretion which comprises a
ligand polypeptide or a salt, for a grotein-coupled receptor (GPCR)
protein. The agents for promoting proiactin secretion can be used for
treating or preventing hypowearianism, goneryst carogenesis menopeusal
syndrome, euthyroid or hypometabolism. They can by used for promoting
lactation in a domestic manmal and as an aphrodisiac. The agents for
inhibiting prolactin secretion can be used for treating or preventing
pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,
prolactinoma, infertility, impotence, amenorrhes, galactorrhes,
caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,
for briefinhibitory agents can also be used as contraceptives. The agents for
modulating pitacental function can be used for treating or preventing
choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,
abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

                                                                                                                                                                                                               The present sequence represents a human type ligand fragment. It

Is used in the course of the invention. The specification describes

an agent for modulating prolactin secretion which comprises a

CC ligand polypeptide or a sait, for a G protein-coupled receptor (GPCR)

CC protein. The agents for promoting prolactin secretion can be used for

CC treating or preventing hypocovarianism. They can by used for promoting

CC syndrome, cuthyroid or hypometabolism. They can by used for promoting

CC inhibiting prolactin secretion can be used for treating or preventing

CC inhibiting prolactin secretion can be used for treating or preventing

CC pluitary adenomatosis, brain tumour, emmenlopathy, autolumune disease,

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC acromegaly, Chlari-Frommel syndrome, Argonz-del Castilo syndrome,

CC acromegaly, Chlari-Frommel syndrome, Argonz-del Castilo syndrome,

CC rorbes-Albright syndrome, Sheehan syndrome or dyszoospermia.

CC The Inhibitory agenta can also be used as contraceptives. The agents for

CC modulating placental function can be used for treating or preventing

CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fettus,

CC charian saccharametabolism abnormal linidmetabolism or particular.

The invention relates to a murine pitultary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pitultary, central nervous ayatem, pancreas and other CC function can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementis, Alzheimer's, Parkinson's or Huntington's CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; creutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genea, as models of CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide sequences; in receptor-binding assays; for production of Ab and CC related sequences; in receptor-binding assays; for production of Ab and CC animals. The present sequence represents a bovine genome-derived ligand CC ligand for the sequence represents a bovine genome-derived ligand collypeptide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 13

The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing GPR10 (human) or UHR-1 (rat) are used to produce a recombinant GC ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a GC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's GC diabetes; achizophrenia; disorders of growth hormone accretion; cancer; CC operative nutritional status and as vasopressor. Transgenic animals GC carrying the idgand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide encoding DNA or its mutein are used to GC disease, for drug screening and as source of cell lines. The ligand CC polypeptide DNA is used as a source of probes and primers; to identify CC antispen; in receptor-binding assays; for production of Ab and CC antispen; and may also be used for the preparation of anti-iigand polypeptide con antiscre; the disease is not cancer and to develop transgenic animals. Sequences AAM95174 to AAM95178 represent antigenic canchides.

                                                                                                                                                    This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placents, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a bovine peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                             Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin aecretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bovine; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow caeaarean aection; artificial fertilization; galactostasis; goat; pig;
